

Ecommerce Project

Month Name	Total Revenue	COGS	Profit	Profit	Sales Count	Total Revenue
☐ January	35.28M	21.99M	13.29M	38%	52K	35.28M
☐ February						Best Product Sold Dairy and Eggs 5.7M (16.1%) of total Sale
☐ March						
☐ April						Best Customer Hazel Patterson spend 0.41M
☐ May						
☐ June						
☐ July						
☐ August						
☐ September						
☐ October						
☐ November						
☐ December						

Behind the Scenes: From Data Chaos to Business Intelligence

- 1. Data Preparation (The Foundation):** The raw data I received was fragmented, incomplete, and contained extreme outliers. To ensure accuracy, I performed a rigorous cleaning process using **SQL**. I handled missing values, addressed inconsistencies, and filtered out noise, transforming 'noisy' data into a reliable source of truth.
- 2. Architecture & Modeling (The Engine):** Once cleaned, I loaded the data into **Power BI**. To ensure long-term scalability, I built a robust **Star Schema** model, including a dedicated **Calendar Table** for time-intelligence and a separate **DAX Measures** table. This architectural design provides seamless data flow, allowing the client to add new data sources in the future without impacting performance.
- 3. Business Impact (The Outcome):** The results were transformative:
Before: Fragmented data left the stakeholders blind to their true performance.
After: A fully interactive dashboard allows them to track Revenue by city and branch with a single click.
Scalability: The client can now monitor performance trends and growth trajectories for any branch or product, turning historical data into a strategic roadmap.
